

A data driven organization focus on the system of insight to integrate data from different sources to collect insight in data and apply this in their (primary) processes. This insight could range from simple analytics till sophisticated Deep Learning models. This architecture is a collection of the services to train and develop these models, develop apps (microservices) to deploy those and make those models available to the (primary) business processes of your company.

Enterprise Architecture Blueprint for a Resilient Data-Driven Organisation
